New Article

Use of computers in high energy physics experiments
Ford and G R Macleod 1

Reviews

Airborne polarimeter for atmospheric radiation studies
Hariharan 10

Geometry signal-strength variations from balloon-borne equipment
A method for balloon range estimation T A Clark 13

Preparation of thin n-type silicon specimens for radiation
damage studies P L F Hemment and P R C Stevens 19

Dielectric frequency measurement of the dielectric constant of
conducting liquids with $\tan \delta$ up to 500 D Rosen, R Bignall,
M Wisse and A C M van der Drift 22

Nuclear magnetic resonance spectrometer using a superconducting
magnet J D Halliday, H D W Hill and R E Richards 29

Waveform multiscaling with a 400 channel analyser and point plotting
channel contents (applied to Mössbauer spectroscopy) D Alger,
Morice, S Nanayakkara and L V C Rees 33

Image windows for electronographic image tubes J D McGee and
McMullan 36

Storage image tube for optoelectronic computing B L Morgan,
V Smith and G A Wilson 41

Image analysis in the electron microscope A Strang 45
Measurement of oxygen microcathode currents by means of a
negative feedback transistor operational amplifier system with digital
delay C E W Hahn 48

Hot wire anemometer for the measurement of the three
orthogonal components of wind velocity and also directly the wind
direction, employing no moving parts D T Gjessing, T Lanes and
Angerud 51

A new theoretical model for the laser Doppler meter M J Rudd 55
Compact design for measuring electrical conductivity at high
pressures and varying temperatures E King 59

Convection-heated furnace for measuring thermal expansion by
x-ray diffractometry H M Fritz and W M Williams 63

High temperature microfurnace for use in vacuum and inert
atmospheres A E B Presland and J R White 67

Thermal properties of cholesterol and estimation of impurity by
differential scanning calorimetry W L G Gent 69

Elastic behaviour of a sharp obtuse wedge impressed on a
surface W A Caw 73

Precise measurement of the compression of a cylinder in contact
with a flat surface E G Thwaite 79

Further development of the cold tip velocity meter G S Harris 83

Permeability membrane-cell used in the study of active transport of
solute across isolated living frog-skins when the hydrostatic
pressures are controlled on each side of the skin E T Hutchings,
J Nutbourne and J D Howse 87

The display of information from scanned measuring systems by
contour mapping J P Flemming 93

Notes on Experimental Technique and Apparatus

Thermostat for resistivity measurements at temperatures from 4°K
up to 350°K J Hennephof, G Hoekstra and J van Overbeeke 96

Low-temperature attachment for the Unicam SP500
spectrophotometer J S Coe and R E Slaney 98

The construction of a rectangular shock tube for use with pressure
and vacuum C J S M Simpson, T R D Chandler and
F W J Clutterbuck 99

Optical cell for isochoric measurements of refractive index near the
critical region J A Chapman and B L Smith 100

A compact right-angle drive employing a flexible wheel
A B Pippard and F T Sadler 101

A simple technique for sealing molybdenum to alumina or
platinum to alumina by means of a glass-ceramic seal P S Rogers,
J Butler and B C H Steele 102

A modification to a variable shear stress air turbine viscometer
S S Davis 102

A simple form of demountable flash lamp F W Willets, G C Terry
and V E Uffindell 103

The conversion of an automatic slide projector to transport
radioactive foils to a pair of counters K D Grose and N L Hancox
105

Enhanced field-evaporation by gas impact and field-ion microscopy
of β silicon carbide and lanthanum hexaboride D A Smith 106

Scintillation guard detectors for low-activity beta measurements
with Geiger-Müller counters D Williams and N Whittle 107

Simple low temperature cell for absorption spectroscopy in the
ultra-violet and visible region F Aurich 109

A fibre optical angular displacement transducer C R Hazell and
S L Engel 110

A method of measuring small frequency change and its application
to two methods of thin film thickness measurements J S Osborn 111

Thermal relaxation in a helium-4 vapour pressure bulb
H H van Mal 112

Computer program for x-ray diffraction line profile analysis
T Ungar 114

A method for reducing movement in holographic emulsions
J N Butters, D Denby and J A Leendertz 116

Fluorescent screens for high stress conditions R F Thumwood and
M J Needham 118

A Weissenberg goniometer modification to assist the comparison
of the lattice constants of two crystals S Villarroel 118

The production of clean flat strain-free germanium surfaces
B A Unvala, Aung San and D B Holt 119

Apparatus for continuous recording of magnetization against
temperature from a 60 Hz hysteresis loop tracer R D Pierce and
S E Haszko 121

A probe electrode technique for controlling the thickness of
electrophoretic ceramic deposits D C Cornish 123

February 1969

Review Article

The design of unattended stations for recording geomagnetic micropulsation signals R J Lamden **125**

Papers

A radio echo equipment for depth sounding in polar ice sheets S Evans and B M E Smith **131**

A gas-actuated acoustic dilatometer for thermal expansion measurements on metals G E Goring **137**

A direct-reading bridge for a platinum resistance thermometer C W van der Wal and L C E Struik **143**

A system for resonance fluorescence and Raman spectroscopy using an argon laser as the light source W G Richards, J A Hall and A R Taylor **146**

Sensitivity improvements in spectrophospho-fluorimetry J Langelaar, G A de Vries and D Bebelaar **149**

The silicon integrating light detector applied to optical pyrometry P J Rixom and W G Townsend **153**

An on-stream infra-red analyser using multi-attenuated total reflectance K G Carr-Brion and J A Gadsden **155**

Properties of photomultipliers with caesium telluride photocathodes W N Charman **157**

A new technique for improving domain pictures in Kerr-effect microscopy using a laser source S K Dey, M J Bowman and A D Booth **162**

Accurate calculations of double-aperture electrostatic immersion lenses F H Read **165**

Relationship between the correction factor of the four-point probe value and the selection of potential and current electrodes R Rymaszewski **170**

A method for balancing Ross filters in x-ray diffraction of liquids G J A Gerrits and W Bol **175**

A multi-channel digital event-recorder for field applications M J Goodspeed and J V Savage **178**

Apparatus for controlled electron beam co-deposition of alloy films M Oron and C M Adams **183**

Production of thin solid-hydrogen foils for use as targets in high vacuum R Sigel, H Krause and S Witkowski **187**

The display of neutron radiography results by direct viewing of a scintillating plate I C Hendry, A R Spowart, J A Robertson and A J Oliphant **191**

An ultrasonic technique for measuring the transient movements of a liquid-vapour interface R B Duffey and R S Hall **193**

Noncontacting air gauges for internal dimensional measurements on waveguide and transmission line tubing J S Field **195**

Remote measurement of displacement by use of a γ -ray source B E Noltingk and P C O'Neill

Notes on Experimental Technique and Apparatus

A method for producing negative ion beams with energies below 10 eV A E Roche and C C Goodyear **201**

A modification to the jet electropolishing specimen preparation technique for electron microscopy W M Stobbs **202**

Radio-frequency plasma reactor for polymer surface treatment J R Hollahan **203**

Instant calibration films for electron diffraction A Fursey **205**

Fabrication of thin-film microcircuits on curved substrates W A Seed **206**

An accurate method for measuring the magnification of an electron microscope L M Skinner **206**

A laser calorimeter for a wide power range E Bayer and G Schaack **208**

An apparatus for cutting large soluble crystals C Forno **210**

The use of a heat shrinkable sleeve in a lubricant-free connector for glass vacuum systems B S Del Duca **211**

A fine-regulation valve for use in gas chromatography E J Balslev **211**

A piezoelectric power supply for an infra-red image converter tube D A Bateman and D E Killick **212**

Articulated vacuum line A H Bass **215**

A spherical cavity calorimeter for measuring absolute laser energies J R Wilson **215**

A pressure transducer of the strain-gauged diaphragm type J C Newcomer **218**

A combined oscillator-detector circuit for programmed laboratory sequences V P Lipton and A Lipton **219**

March 1969

Review Article

Spark and streamer chambers P Rice-Evans **221**

Papers

An automatically stabilized bridge nuclear magnetic resonance spectrometer C W Fryer **230**

Films for neutron radiography: an investigation of film-intensifying screen image recorders M R Hawkesworth **235**

Further comments on the origin of orientation-dependent patterns obtained in the scanning electron microscope A M B Shaw, G R Booker and D G Coates **243**

Optimum conditions for generating channelling patterns in the scanning electron microscope E M Schulson and C G van Esen

An automatic force balance for gravimetric and magnetic analysis G V Beaton **252**

Manufacture and precision interpolation of film-type carbon resistance thermometer W M Star, J E van Dam and C van Baaren **257**

A method for dynamic determination of the dew (or frost) point and its application to radiosonde humidity measurement A Malinovski and D Yordanov **263**

Magic-T measurements of transient impedance changes O G Vendik and K W H Foulds **269**

Some experimental and estimated characteristics of the lanthanum hexaboride rod cathode electron gun A N Broers **273**

A device for dilatometric measurements of crystallization of elastomers V Grmela and L Megarskaja **277**

An electromagnetic modification of the Zimm-Crothers viscometer A R Williams **279**

Notes on Experimental Technique and Apparatus

Cryostat for imposing compressive forces on contacts using an electromagnet T R Thomas, S D Probert and P W O'Callaghan **282**

The measurement of specimen profiles after mechanical testing C E Coleman and M J Ward **283**

A variable temperature cell for reflectance spectroscopy J C Barnes **284**

A simple compact anti-vibration instrument mounting L A W Kemp **286**

A vacuum-tight high current device allowing thermal expansion of the heated element F Remy **287**

Three-beam holography with scatter plates L H Tanner **288**

A mass spectrometer variable leak inlet system for reference compounds used in high resolution mass measurement A M Horne **289**

A continuously recording autographic attachment for a dilatometer G B Heslop **291**

low probe for nuclear magnetic resonance spectroscopy
McIvor **292**
Simple modification to the Ward-type anticontamination trap
the Siemens Elmiskop I R A Willis **293**
flow temperature controller J C Huber **294**
Simple analogue method of amplitude ratio measurement
liński **296**
Preparation of thin foils from 0.01 inch diameter wire for electron
microscopy J A F Gidley and P N Richards **297**
Simple method of supporting samples for infra-red analysis of
homogeneous reactions J F J Kibblewhite and A J Tench **299**
regulation of the temperature in cryogenic experiments using
Zener diodes as sources of heat J W Hodby **300**

Book Reviews 303

April 1969

Output and sensitivity of vacuum gauges using a heated
element in a Wheatstone bridge E M McKay **305**
Digital vacuum torque magnetometer for the temperature range
1000°K E J Fletcher, A de Sa, W O'Reilly and S K Banerjee
Magnetizer for solid specimens R A Newbury **315**
Sensitive torque magnetometer for the measurement of small
magnetic anisotropies Gh Maxim **319**
Application of non-uniform quantization to closed-loop digital
systems R Edwards and J Durkin **321**
Derivative attachment for a prism spectrophotometer B L Evans
K T Thompson **327**
Spectrophotometric studies of ultra low loss optical glasses II:
Double beam method M W Jones and K C Kao **331**
New method of operating an omegatron to improve
performance: the time separation of processes G Comsa and
Mircea **336**
Generators for the production of single bubbles R H Magarvey
P B Corkum **339**
High resolution scanning device for determining the distribution
of weak beta activity in a planar surface F J Wray and P B Tinker
Solid-state sampling circuit for use at low pulse repetition
frequencies F G Marshall **347**
Compact device for low temperature neutron irradiation of
irradiated specimens under a defined tensile stress H Mughrabi **351**
Effect of a.c. ripple in a potentiometer circuit upon Weston
J C E Jennings and R J O'Connor **353**
Novel proximity gauge B E Noltingk **356**
The considerations of selected area channelling in the scanning
electron microscope E M Schulson **361**
Automatic weighing of adsorbed gases, evaluation of surface area
and pore size distribution E Robens and G Sandstede **365**
Notes on Experimental Technique and Apparatus
Vacuum-hot-press for toxic materials J W Kelly **369**
Winding techniques for superconducting dipole magnets
Therion **370**
Capacitance pressure transducer F R G Mitchell **372**
Method of measuring the anisotropy field and the orientation of
easy axis in ferromagnetic wires B F Rothenstein, J Artzner
T Wächter **373**
High precision spectrometer table P Key, G Hayward,
Harrison and V I Little **374**
Application of a light-sensitive potentiometer in the

measurement of the mechanical properties of single fibres
L D Armstrong and T W Mitchell **375**
A calorimeter for infra-red laser power measurement H A Kellock
377
Aperture-indexed collimators for gamma cameras with
semiconductor detector arrays A D Beach **378**
Skin friction balance J W Headley **380**
Controlled electron beam evaporation of beryllium P S McLeod
and C W Nordin **381**
A goniometer for ultra-high vacuum R Behrisch, G Mühlbauer
and B M U Scherzer **381**
Simple cryostat for plastic deformation experiments down to 77°K
S W Broekroelofs and A W Sleeswyk **382**

Book Reviews 384

May 1969

Papers

A mechanical microdensitometer U W Arndt, J Barrington Leigh,
J F W Mallett and K E Twinn **385**
Apparatus for observing dynamic nuclear polarization at low
magnetic fields J C Collingwood and J W White **388**
A flash-photolysis electron spin resonance spectrometer
T J Bennett, R C Smith and T W Wilmshurst **393**
A fifty-channel digital recorder for thermocouple psychrometers
H R Rowse and J L Monteith **397**
A new balanced null-detector circuit for electrometer tetrodes
L A W Kemp, T T Williams and J E Woodall **401**
An accurate voltage-to-frequency converter P J Unsworth **407**
Measurement of the distribution of surface electric charge by use
of a capacitive probe T R Foord **411**
A 250 c, 40 kv spark gap A E Bishop and G D Edmonds **414**
A simple liquid encapsulation technique for the determination of
melt vapour pressures S E R Hiscocks **417**
A high precision micropump J B Steen and O Iversen **419**
An optical interference manometer D H Thompson and
L H Tanner **421**
The practical design of a laser modulator using 45 degree ADP
crystals B Trevelyan **425**
On the use of a skew Brewster angle attenuator within a laser
cavity J A Dobrowolski **429**

Notes on Experimental Technique and Apparatus

Simple equipment for the reliable cleaving and string-saw cutting
of crystal ingots L B Harris **432**
A braking circuit for sub-fractional geared motors J M Roach **433**
A vacuum breakthrough assembly for use with standard
remote-handling tongs A R Pugh and M A M Pirie **434**
The continuous production of gas mixtures containing very low
concentrations of one or more species N Birks and T Flatley **436**
An arrangement for servomechanically controlled Helmholtz coils
K J Ross and R Garment **437**
A practical laser output meter A J Schmidt and R C Greenhow **438**
Quantitative capillary techniques for photochemical experiments in
the liquid phase P Borrell and J Sedlář **439**
The use of sintered pressed disks of potassium bromide as window
materials for the measurement of infra-red spectra under pressure
R Whyman and K Wilding **441**
Increasing the excitation efficiency of a rod laser W A R Macfarlane,
J L Hughes and A Winokuroff **442**
Realization of a constant magnetic field by use of air-cooled coils
of semi-ellipsoidal geometry M Anthony and R Oppel **444**
A simple specimen straining device for the scanning electron

- microscope P Holliday and P H Newman **444**
 A device for velocity measurement in oscillatory boundary layers in water J F A Sleath **446**
 Shadowed foils: an electron microscope technique for the simultaneous study of surface deformation markings and the underlying dislocation structure A B Mitchell and D G Teer **448**
 A three wavelength photometer for controlled deposition of Kerr magneto-optic enhancement films P Beckley and C H Porter **449**
 Airtight cover for specimen stubs for the scanning electron microscope P D P Koch and H B Wild **451**
 Some properties of a vibrating contact arc ion source P T Stroud **452**
 A 100 kHz electron spin resonance modulation amplifier J T Apostolos and R E Simpson **453**

Corrigendum

- A fibre optical angular displacement transducer C R Hazell and S L Engel **455**

Letters to the Editor

- Use of a pulsed laser tracking system for tracking satellites J L Hughes, O Randva, B W Sweeney, P C Stedman and L D T Moyle **456**

June 1969

Papers

- A geothermal heat flow probe for *in situ* measurement of both temperature gradient and thermal conductivity D A Christoffel and I M Calhaem **457**
 The focal properties and aberrations of magnetic electron lenses T Mulvey and M J Wallington **466**
 A simple continuous transfer liquid helium cryostat for an ultra-high vacuum field ion microscope D N Seidman, R M Scanlan, D L Styris and J W Bohlen **473**
 A linear refractometer for liquids J E Geake **477**
 An automatic scanning densitometer and its application to x-ray crystallography Nguyen-huu Xuong **485**
 A theoretical study of the use of internal standards for precise isotopic analysis by the surface ionization technique Part II: Error relationships M H Dodson **490**
 Measurement of electrolyte conductance with a four-electrode alternating current potentiometer F P Anderson, H C Brookes, M C B Hotz and A H Spong **499**
 A generator of high voltage pulses with subnanosecond risetime and adjustable duration D L Pulfrey **503**
 The design and loading characteristics of a high pressure unit for the range 20–70 kb S Nichols **506**
 An autoranging reader for thermoluminescent dosimeters P N Casbolt and K D Cliff **511**
 The measurement of thermal expansion coefficient of tungsten at elevated temperatures R H Knibbs **515**
 A laboratory arc melter S Arais and G P Wray **518**
 Elimination of instrument polarization in spectropolarimetric luminescence studies F J Bryant and A F J Cox **521**
 A length stabilized 12 m measuring base P H Sydenham **523**
 A continuously recording radiometer for emissions from the night sky between 1 and 2 μm D Pardy **526**

Notes on Experimental Technique and Apparatus

- A novel low temperature infra-red cell C Gooley, K P Gross and H Keyzer **531**
 Precise linear movement with optical flats G B Boulton and C V Cooper **532**
 A simple seal for leading wires into a vacuum system

D N Batchelder and G R Sidey **533**

Fluorimetry of a thin liquid layer F W J Teale **533**

Apparatus for the deposition of low frequency cadmium sulphide transducers J D Llewellyn, H M Montagu-Pollock and E R Dobson **535**

An automatic surface balance suitable for use at the oil–water or air–water interface A Doroszowski and C J H Monk **536**

Determination of mixture composition by the float balance M Srichand, M A Tirunarayanan and A Ramachandran **539**

A simple liquid helium depth gauge using carbon resistors as sensing elements R S Crisp and J Rungis **541**

A simple method for the rapid assembly of carbon dioxide laser tubes T Powell **542**

Furnaces with low thermal gradients for molten salt spectrophotometry C R Boston and G P Smith **543**

A sensitive radio receiver for ionospheric measurements F D Szachta, R E Houston Jr and L E Larson **546**

A high vacuum low temperature specimen transfer device for use with an electron microscope D J Herrell and R P Ferrier **548**

An automatic digital line centring device for direct reading emission spectrometers S Vassiliou, W W Schroeder and H van der Piepen **550**

Thin windows for flow proportional counters in x-ray fluorescent spectrometers G Brown and R Kanaris-Sotiriou **551**

Corrigendum

- Channel multiplier life tests in ultra-high vacuum D G Smith **553**

July 1969

Review Article

- Recent advances in electron probe microanalysis P Duncumb **555**

Papers

- Measurement of fibre potentials in a scanning electron microscope L A Weitzenkamp **561**
 The application of stereographic techniques to the scanning electron microscope G S Lane **565**
 Some techniques of transmission Lorentz microscopy W J S Blackburn, G H Curtis and R P Ferrier **570**
 A bakeable, demountable field ion microscope with a continuous transfer liquid helium cryostat D G Ast and D N Seidman **575**
 Spectrophotometric studies of ultra low optical glasses III: ellipsometric determination of surface reflectances C R Wright and K C Kao **579**
 An improvement of the phase stabilization of a simple microwave interferometer B van der Sijde and L P M van Run **584**
 A versatile high energy scanning electron diffraction system for observing thin film growth in ultra-high vacuum and in a low gas pressure M F Tompsett, D E Sedgewick and J St Noble **587**
 Apparatus using carbon-14 labelled materials and automatic radio-gas chromatography to investigate the carbon dioxide–carbon reaction in reactors D A Dominey and F S Feates **591**
 A method for the measurement of instantaneous pulse frequency Z J Koles, E M Edwards and R S Smith **597**
 An x-ray monochromator for diffuse scatter measurements J S Reid and T Smith **601**
 Stabilization of a mains driven high voltage generator using silicon controlled rectifiers D W Auckland and R Cooper **605**
 Measuring combination mode vibration patterns by hologram interferometry N-E Molin and K A Stetson **609**
 Germanium piezoresistive element on a flexible substrate W D Edwards and R P Beaulieu **613**
 A d.c. millivolt integrator R H Hill **616**

Notes on Experimental Technique and Apparatus

Method of mounting small samples for electron-probe analysis G Yates and J I Bramman **619**
 Design of a multitube inclined manometer T L Shaw **620**
 The conductance molecular leak for gas sampling at high pressure M Ailliet, M Ackerman and F Biaumé **622**
 Use of Teflon polishers for precision optical flats G Otte **622**
 Absolute reflectometer for use with small samples in the visible vacuum ultra-violet D Jones, A H Lettington and Richmond **623**
 Lightweight optical refractometer for field use M S Brown **625**
 Mobalance protection from corrosive atmospheres N Birks and N Tattam **628**
 Reference bridge method for comparison of four-terminal resistors Paulin **629**
 Simple moving system for nuclear magnetic resonance adiabatic magnetization experiments G P Jones, J T Daycock and Roberts **630**
 Transducer for measuring and controlling low differential pressure in gases D V H Rees and M E Nellist **631**
 Thermal measurements with an electronic microforce balance Cross and C Smalley **633**
 Improved photographic print washing unit R L Bryant **634**
 Optical lever for thickness determination of thin crystal plates Davis **635**

A frequency controlled laser for long path interferometry V B Gerard **749**

A Lenard-window image tube for astronomical use R Habel and G Marangoni **751**

A cryostat for thermally stimulated currents in dielectric films W S Chan and C K Loh **754**

A method for the protection of highly reactive metals during exposure in an x-ray powder diffraction camera M G Barker **755**

Differential erosion-rate polishing of soft crystal laser rods G W Fynn and W J A Powell **756**

The production of circular 'knife-edge' apertures R H Furniss **758**

Weighing in a hermetically closed box with the balance outside J van Overbeeke **759**

Abridged Notes 760

September 1969

Papers

- An apparatus for the study of macromolecular solutions by the Kerr effect H G Jerrard, C L Riddiford and P Ingram **761**
 A machine for simultaneous electrolytical polishing and flattening with rotating cathode H Fehmer and W Uelhoff **767**
 On the strainfree preparation of copper single crystal samples with low dislocation densities H Fehmer and W Uelhoff **771**
 A phase sensitive interferometer for the measurement of electron density in transient plasmas A E Dangor, J S Dolby and S J Fielding **776**
 A cathode assembly for feeding powder into the plasma of expanded d.c. arcs J W Bryant, J M Cox and D Whyman **779**
 Interior resistance heated open tube epitaxial reactor I F Nicolau **782**
 A two frequency vibrating capacitor method for contact potential difference measurements B H Blott and J T Lee **785**
 Dynamic studies of fibres and polymers in the specimen chamber of the scanning electron microscope A Hepworth, T Buckley and J Sikorski **789**
 A differential-capacitance transducer for measuring small displacements V T Morgan and D E Brown **793**
 An aid to the use of averaging computers in experimental investigations J Hodby **796**
 Rotatable polarizers for the near infra-red R M Lambert and R D Enoch **799**
 A flashing-pumped dye laser for resonance scattering studies of the upper atmosphere A J Gibson **802**
 Apparatus for x-ray measurements on reactive materials at 2500°C E A Harper **807**

Notes on Experimental Technique and Apparatus

- A 15 cm aperture shutter system by exposure in the 10 ms region A G Hunt **810**
 Dual regulated power supply for operational amplifiers F J Goldwater **811**
 Low power telemetry for circulation studies F R G Mitchell **812**
 A simple device for routine measurements of the oxidation-stability of polymers by means of oxyluminescence P A H M Hol and R J de Koch **812**
 Scanning electron micrographs of small holes M De Mets and A Lagasse **813**
 A mercury transition cell for high pressure calibrations A R Beavitt **814**
 Observation and measurement of surface relief of diffraction gratings using electron microscopy techniques J M Bennett **816**
 A wide range cryogenic thermometer P R Adby **817**
 Improvements to a microscope-reflectance unit for measurements on polished mineral grains A J R Bennett **819**
 A proved design for an emanating radiothorium source holder D H Poole and A G Warner **820**
 The resolution of composite photographic systems A D Booth **822**
 A versatile uniaxial tensile testing machine Y Komen, D G Brandon and M Rosenbaum **823**
 Ultra high vacuum fatigue effects in channel electron multipliers A F Timothy and J G Timothy **825**
 Preparation of thin vanadium foils for transmission electron microscopy J Bressers and P Helbach **828**
 A single compensator for photoelasticity H M Hasseem and A Subramanian **830**
 A simple technique for the determination of Young's modulus D Joshi, M I Bhatnagar and R S Shrivastava **831**
 Velocity measurements in a plasma jet D M Cogan **834**

October 1969

Papers

- Fizeau interferometer profiles at finite acceptance angles T A H **837**
 An ultra-violet microspectrophotometer for measurements with polarized light R Wetzel, D Zirwer, W Schaelike, H Gallowski J Schmidt, H Knuepfer and H Bonnke **841**
 Modulation effects and their application in high resolution nuclear resonance spectrometers M Birkle and G Schultz **846**
 Prediction of lateral instabilities in the Faraday magnetometer A M Stewart **851**
 Electron mirror observation of an interdigital electrode structure O I Szentesi and M E Barnett **855**
 A new electron gun for the formation of metal vapour by evaporation or sublimation inside an electron microscope R B Marcus and C J Calbick **859**
 An investigation into the instabilities of the hot cathode ionization gauge caused by operation in hydrogen J G Werner J H Leck **861**
 A density discriminator for use in radiation dosimetry by photographic film K D Cliff **867**
 Measurement of complex permittivity of liquids at microwave frequencies G H Barbenza **871**
 Sources of error in the modulated wavelength optical thickness monitor for dielectric layers P H Lissberger **875**
 Measurement of autocorrelation function and power spectral density of pre-breakdown conduction current pulses in liquid dielectrics I Megahed and A Nosseir **880**
 A method for measuring plasma arc wind tunnel gas velocity with a position controlled electron beam probe C Cason **885**

Notes on Experimental Technique and Apparatus

- Precision vacuum furnace for neutron intensity measurements M Antonini and E Nicotera **890**
 Electrodynamic suspension of liquid hydrogen droplets B A Powell **892**
 A modified double slit Weissenberg technique P M Colman **893**
 A simple temperature controller B Window **894**
 An improved apparatus for the measurement of Auger electron spectra T E Gallon, I G Higginbotham and M Prutton **894**
 An apparatus for calibrating velocity probes in liquids W A See and N B Wood **896**
 A cheap and simple seal for leading wires into a vacuum system F E Neale and R E Thurstans **898**
 Programmed random time interval signalling device E F Keen and P J Calver **898**
 Elimination of velocity sidebands in the transmission function of slotted disk velocity selector J Wykes **899**
 A new technique for preparing rock spheres B L Vickers and R E Thill **901**
 Proposal of a new high frequency wattmeter D I Lasič and V J Lasič **902**
 A simple saturation amplifier to produce 2 A, 100 V, 40 ns rise-time pulses J A Piper, W J Sandle and O M Williams **903**
 An ultra-violet transmitting window for image tubes S D Fussey and R J Rout **905**
 A device for automatically recording the sample temperature in nuclear quadrupole resonance spectroscopy D A Tong **906**
 A condensation nucleus counter with automatic cycling and digital recording M A Pedder **907**

Letters to the Editor

- Manufacture of a film-type carbon resistance thermometer H van Dael: W M Star **910**

X-band e.s.r. spectrometer with a ruby maser preamplifier
Buckmaster: R J Collier **911**

November 1969

ers
velocity profiles in laminar oscillatory flow in tubes J Harris,
eev and W L Wilkinson **913**
sensitive apparatus for the measurement of induced
neto-crystalline anisotropy J E Knowles **917**
asurement of localized surface potential differences M Wolff,
Guile and D J Bell **921**
as trigatron for chopping very high-voltage 50 Hz frequency
eforms and its application to liquid breakdown measurements
Nelson and B Salvage **925**
mination of instrumental polarization from polarization
surements P N Clout and D W O Heddle **929**
user manipulator for surgical use A D Beach **931**
automatic fringe follower for a long path laser vacuum
ferometer V B Gerard **933**
straight needle-probe for the measurement of blood velocity
Bellhouse, F H Bellhouse and A Gunning **936**
accurate determination of the thermal conductivity and
enz number of metals P J Jackson and N H Saunders **939**
placement and tilt transducers of 140 db range F D Stacey,
W Rynn, E C Little and C Croskell **945**
robeam back-reflection x-ray camera with arrangement for
tioning a pre-selected area F J ter Avest and J A Klostermann
method of applying an avalanche transistor generated 70 ns
ng pulse to a focused photomultiplier B L Elphick **953**
paratus for automatic electrical measurements on
conductors from liquid helium temperature to 400°K
Elliott and D J Wilson **956**
ple pulse grating method for specific heat measurement
chröder and W M MacInnes **959**
ual-purpose schlieren system T G L Shirtcliffe **963**
yostat for the measurement of magnetic susceptibility between
and 20°K N F de Oliveira Jr and C J Quadros **967**
reliability of magnetic susceptibility data obtained with the
y method J G J Sloat, C H Massen and J A Poulis **970**
atic investigation of the Coulter principle of particle sizing
Eckhoff **973**
ro heat-flow calorimeter for investigating the melting and
se transition behaviour of triglyceride crystals P de Bruijne **978**
tial resolution of the vorticity meter and other hot-wire arrays
Wyngaard **983**
ombined yawmeter and velocity meter for low-speed flow
Chui, E G Farmer and B S Massey **988**
instrument for measuring the coefficient of linear expansion of
metal bars L G Turnbull **991**

es on Experimental Technique and Apparatus

ynamometer for the accurate measurement of mixing torque
Nienow and D Miles **994**
eneral purpose cryostat R C Tyagi **995**
ethod to determine the recrystallization temperature of
ndrical ferromagnetic layers B F Rothenstein **996**
ry sand feeder R T McCrone **997**
mple integrating exposure meter for automatic enlarger control
Cryer **998**
beam stabilizer for thermal ionization source mass
trometers H Z Sar-El **999**

Compensation for the thermal lag of a thin wire resistance
thermometer by means of a constant temperature hot-wire
anemometer P Freymouth **1001**

A method for obtaining time correlated streak photographs
A Dejke and S K Händel **1003**

The measurement of magnetic circular dichroism A C Gilby and
P E R Tatham **1004**

A device for aligning a large Fabry-Perot etalon G L Rogers **1006**

A low cost decade with read-out access K D Grose **1007**

A direct-coupled phase-sensitive detector D T Smith **1009**

A method of measuring heat fluxes across nickel surfaces using the
metal oxide on the surface P L Weickhardt, I M Ritchie,
R J Batterham and D G Wood **1010**

Formation of carbides on tungsten wires W J Croft and
K J Nygaard **1012**

December 1969

Papers

A high resolution charge and mobility spectrometer for
radioactive submicrometre aerosols W J Megaw and A C Wells
1013

An improved conductivity cell for the continuous measurement of
sulphur dioxide in the atmosphere C M Killick **1017**

A crossed molecular beam apparatus and associated computer
programs for the measurement of differential scattering cross
sections L T Cowley, M A D Fluendy, D S Horne and
K P Lawley **1021**

Calibration studies on a piezoelectric sensing diaphragm for the
detection of micrometeorites in space J A M McDonnell **1026**

Data acquisition and evaluating systems for a low resolution mass
spectrometer B Hedfjäll, P Å Jansson, Y Mårde, R Ryhage and
S Wikström **1031**

Etude comparative de divers types de volumes resonnants pour
spectrometres a resonance paramagnetique electronique en ondes
metriques M Decorps et C Fric **1036**

Fast image intensifier system M R Barrault and M M Kekez **1041**

The design of three-element electrostatic electron lenses
D W O Heddle **1046**

A simple electron probe microanalyser utilizing electrostatic
focusing R G Butters **1051**

A high-contrast directional detector for the scanning electron
microscope J R Banbury and W C Nixon **1055**

Regenerative system for continuous measurement of internal
friction and Young's modulus of alkali halide crystals I E French,
J E Sinclair and H F Pollard **1060**

Hydropneumatic apparatus for the Czochralski growth of crystals
J C Brice, G W Lelievre and P A C Whiffin **1063**

Pulse modulators for Gunn effect oscillators G S Hobson and
Z U Kocabiykoglu **1066**

Composite thermocouple-resistance sensors with linear output
A Thulin **1069**

An ultrasonic interferometer for the acoustic analysis of gas
mixtures P L Thorpe **1073**

Assessment of the argon laser as a suitable source for
low-frequency heterodyne anemometry experiments D A Jackson
and D M Paul **1077**

An automatic dilatometric technique for the study of solid-liquid
metal interaction K Z Czoch and J Mackowiak **1081**

The precision manufacture and registration of masks for vacuum
evaporation A E Hill and P A Rigby **1084**

Fabrication of extremely fine glass micropipette electrodes
T K Chowdhury **1087**

A photoelectric method for measuring surface concentrations
H M Lowe and H D Wiederick **1091**

- A constant shearing stress viscometer A Schuringa **1093**
A tensioned-wire strain seismometer P H Sydenham **1095**
The design and operation of a fast 2π gas-flow counter for alpha particles D Yeates, S Harris, C Doust and H Parish **1098**

Notes on Experimental Technique and Apparatus

- Identification of boiling regimes with a reaction-force apparatus
L C Witte and P J Henningson **1101**
Manometers with collinear liquid columns J F G Darby **1103**
An apparatus for the measurement of bulk densities of powders *in vacuo* and in different vapours with continuous tapping
J R Christian, D Dollimore and N F Owens **1103**
Rapid measurement of the decay rate of vibrations J M Mason and H G Leventhall **1104**
A nuclear magnetic resonance sample temperature controller using liquid nitrogen injection M O Norris and J H Strange **1106**
A matching network for discharge measurements at high voltages in unscreened test areas E A Pritchard **1108**
A simple composite helium Dewar V M Conway, P David and M Heath **1110**
Cellule à joints métalliques pour étude de l'adsorption par spectrographie infrarouge R Foulatier, D Lamarre and J Fraissard **1111**
The production of low scattering dielectric mirrors using rotating vane particle filtration W P Barr **1112**
A double-beam recording spectrodensitometer D Staynov and G Stainov **1114**
An optical roam-inspection probe J E Geake **1116**
Use of a sodium jacket for temperature equalization L E Chulos **1118**
Powder dropper for flash evaporation A K Dua and S B Thatte **1119**
Improved energy analyser for the scanning electron microscope O C Wells and C G Bremer **1120**
A quenching circuit of very short rise time for Geiger-Müller counters H Eckey **1121**
The slow speed multi-sawing of brittle semiconducting compounds W J A Powell and G W Fynn **1122**
A simple Stark modulator M J Whittle and B Weiss **1123**
Chart marking from a digital counter output D Griffiths **1124**
Response time of F4000 biplanar photocell in various holders J G Edwards and R Jefferies **1126**
A recording constant-pressure gas burette J B Williamson **1129**
A Debye-Scherrer camera for the balanced filter techniques or the comparison of two samples G Becherer and G Herms **1130**
A high temperature fibre-optical displacement probe T R Hsu, R G Moyer and F B Banks **1132**
A modified Ubbelohde viscometer for measurement of the viscosity of polymer solutions J Hughes and F Rhoden **1134**
An improved polarimeter for atmospheric radiation studies T A Hariharan **1135**
An improved gas-circulating pump S Arnold, B Franklin, B Hyde, N Lacey, R Merritt and G Reece **1137**
An artificial daylight source for the assessment of non-fluorescent colour D L Thomas **1139**
Temporal resolution of spectral variation L S Harley **1140**
